

## Protecting Residents, Families, Visitors and Staff through Revolutionary Air Purification Technology

COVID-19 has taught us the importance of addressing harmful pathogens no matter how they spread, not just on surfaces or direct contact, but also in the air. Nowhere is this more important than in Senior Living. Protecting everyone in our building and especially those in our care continues to be priority #1, and you can trust us to help keep those in our building safe.

Part of this commitment now includes the installation of cutting-edge Needlepoint Bipolar Ionization (NPBI™) from Global Plasma Solutions, the industry leader in indoor air quality!

This seek-and-inactivate air purification technology comprising billions of invisible ions takes the fight to harmful pathogens, particles and odors in our community, top to bottom, in every room and space. **Most notably, it's independently lab-tested to inactivate a variety of pathogens such as norovirus, MRSA and SARS-CoV-2 (the virus that causes COVID-19).**

The charged ions **also improve the efficacy of our HVAC filters and PPE**, such as masks, further protecting us from harm.

And unlike other outdated forms of ionization, NPBI technology comes with a UL 2998 certification, the highest level of protection granted **that this technology is ozone-free.**

So go ahead, move about and know the air you breathe is as high quality as the care delivered in our community day in and day out.
